This document appears to be a compendium of questions and correct answers concerning maritime safety regulations, mechanical issues, cargo handling, life-saving equipment, and related operational procedures for ships. The questions cover various aspects of maritime operations, focusing on the knowledge required by crew members to ensure compliance with safety regulations and effective response in emergency situations. The Crew Evaluation System (CES) or maritime tests are a complex of examinations aimed at assessing the basic knowledge of maritime specialists in areas specified by the STCW Convention. The test series was developed by Seagull (later renamed Ocean Technologies Group) by Norwegians in 1995, and the online version of the test emerged in 2010 as a e-learning platform. This test is highly popular and widely recognized among sailors. Over 350 companies worldwide utilize the CES testing system to evaluate the competence of their crew members.Each Seagull maritime test consists of a specific number of modules (CBT modules or CBT CDs), which collectively constitute the entire content of the test. For example, the CES exam for engine cadet may include modules related to ship's equipment, mechanisms, and devices. However, besides these specialized modules, such a test will undoubtedly be supplemented with general, fundamental modules that every sailor should be familiar with, such as Fire-fighting, Survival, First Aid, and so on.
