Navigation and presentation of waste management processes and strategies. The presentation includes an overview of waste management, detailing its processes, types of waste, and the waste management hierarchy aimed at minimizing environmental impact. It highlights the importance of waste segregation, treatment, and innovative technologies designed for environmentalists, policymakers, educators, and waste management professionals. The presentation also covers the role of waste management in achieving sustainable development goals, emphasizing the need for a circular economy and the importance of reducing, reusing, and recycling. The presentation is structured into several sections, including an introduction to waste management, a detailed overview of the waste management process, and a conclusion highlighting the importance of sustainable waste management practices. The presentation is designed to be informative and engaging, using a combination of text, images, and graphics to convey complex information in a clear and concise manner. The presentation is suitable for a wide range of audiences, from students and professionals to policymakers and the general public. The presentation is a valuable resource for anyone interested in learning more about waste management and its role in achieving a sustainable future.

Navigate the complexities of waste management with ease using our comprehensive waste management PPT presentation and Google Slides templates. Waste management involves collection, transportation, disposal, and recycling of waste to minimize environmental impact, promote sustainability, and ensure public health, through various methods including segregation, treatment, and innovative technologies. Designed for environmentalists, policymakers, educators, and waste management professionals, these templates offer a valuable resource for understanding, addressing, and solving waste management challenges. Covering a broad spectrum of topics, our templates delve into various aspects of waste management, including types of waste, 4 methods of proper waste management, waste management from common household, and process of industrial waste treatment. Each slide is thoughtfully curated to provide a clear, informative, and visually appealing presentation of key concepts, making it accessible to audiences of all levels of expertise. What sets our templates apart is their 100% editable and customizable features, allowing you to tailor every element of your presentation to suit your specific needs and preferences. Whether you're delivering a lecture, leading a workshop, or presenting research findings, our templates provide the flexibility and versatility to effectively convey your message. Elevate your waste management presentations today by downloading our expertly crafted templates. 0 ratings% found this document useful (0 votes)56 viewsThe document provides an overview of waste management, detailing its processes, types of waste, and the waste management hierarchy aimed at minimizing environmental impact. SaveSave Waste Management Presentation For Later%0% found this document useful, undefined Waste Management It is the collection, transportation, processing or disposal, managing and monitoring of waste materials. What is Waste Management? Distinct practice from resource recovery which focuses on delaying the rate of consumption of natural resources. IMPROPER WASTE DISPOSALCAUSES OF IMPROPER WASTE DISPOSAL Throwing garbage everywhere. Lack of trained manpower Lack of recycling and reusing waste materialsCAUSES OF IMPROPER WASTE DISPOSALEFFECTS OF IMPROPER WASTE DISPOSAL Sickness Soil Contamination Animal Extinction Plants destroyed Decreased of oxygen Contamination of waterPROPER WASTE DISPOSALREDUCE, REUSE, RECYCLEREDUCE To bring or lead back to any former place or condition. To restore to its proper place or condition, as a displaced organ or part as to reduce a dislocation, a fracture etc. To bring to the metallic state by separating from impurities. HOW TO REDUCE WASTE? Say no to plastic bags Composting Proper waste disposal Avoid throwing electronicsREUSE Use an item more than once. This includes conventional reuse where the item is used again for the same function. By taking useful products and exchanging them, without repressing, reuse help save time, money, energy, and resources.RECYCLE Processing of used materials (wastes) into new products to prevent waste. To put or pass through a cycle again.REFLECTION People should have discipline in implementing proper waste disposal. Always reduce , reuse and recycle materials. Avoid using plastic bags.REFERENCES //www.google.com.ph/hl=t&cp=1&pgs_id=1y&xhr=t&q=c+causes+of+waste+m+management&pf=p&scient=psy-ab&source=hp&pbx=1&ooq=causes+of+waste+m&a&q=0&aqi=g1&aql=&gs_sm=&gs_upl=&bav=on.2,or_r_gc_r_pw,.cf.osb&fp=9c790834950c8937&biw=1366&bih=667 t&cp=1&pgs_id=1y&xhr=t&q=c+causes+of+waste+m+management&pf=p&scient=psy-ab&source=hp&pbx=1&ooq=causes+of+waste+m&a&q=0&aqi=g1&aql=&gs_sm=&gs_upl=&bav=on.2,or_r_gc_r_pw,.cf.osb&fp=9c790834950c8937&biw=1366&bih=667 by: LEADER: John Rey Sawi MEMBERS: Bojo Isidro Kiarah Gail S. Malacas Rochelle Mora Azil Shane M. De Leon AldrichJosephD. Entoma Johnny Boy Recella Teacher/Coach Waste Management is a crucial topic in today's world since organizations all over the world are campaigning to save this planet. Our PowerPoint templates of waste management target important aspects of pollution and environmental risk. These PowerPoint Waste Management Templates include shapes and diagrams to structure presentation topics, as well as ecology and recycling concepts using metaphor graphics. Users can edit and fill these environmental slides with useful information to educate the audience about saving the planet. Download now! Skip to Content The Waste Management Process is a crucial aspect of environmental sustainability, encompassing a series of steps designed to handle waste efficiently from its generation to its final disposal. This process typically includes waste generation, collection, transportation, treatment, and disposal. By utilizing well-structured presentations in PowerPoint (PPT), organizations can effectively communicate the intricacies of waste management to various stakeholders, including employees, policymakers, and the community. PPT presentations can visually represent complex data, such as waste generation statistics, recycling rates, and the environmental impact of waste. They can also outline best practices for waste segregation, reduction, and recycling, making it easier for audiences to grasp the importance of responsible waste management. Furthermore, engaging visuals and infographics can highlight innovative waste treatment technologies and their benefits, fostering a deeper understanding of the subject. Training sessions and workshops can be enhanced with PPT presentations that incorporate interactive elements, such as quizzes or case studies, to encourage participation and retention of information. Ultimately, the use of PowerPoint in waste management education and advocacy serves to promote awareness, drive community engagement, and support the development of sustainable waste management strategies that contribute to a cleaner and healthier environment. Presenting waste management process diagram powerpoint topics. Presenting waste management process diagram powerpoint topics. This is a waste management process diagram powerpoint topics. This is seven stage process. The stages in this process are recycling, energy, recycling and reuse, waste removal, storage and collection, waste transportation. Download this presentation Try Before you Buy Download Free Sample Product Save Hours of Time 100% Editable Compatible with Google Slides Product Description Don't give differences a chance to develop with our Waste Management Process Diagram Powerpoint Topics. Eliminate any cause for dispute. Related keywords Engage buyer personas and boost brand awareness by pitching yourself using this prefabricated set. This Waste Management Powerpoint Ppt Template Bundles is a great tool to connect with your audience as it contains high-quality content and graphics. This helps in conveying your thoughts in a well-structured manner. It also helps you attain a competitive advantage because of its unique design and aesthetics. In addition to this, you can use this PPT design to portray information and educate your audience on various topics. With twenty slides, this is a great design to use for your upcoming presentations. Not only is it cost-effective but also easily pliable depending on your needs and requirements. As such color, font, or any other design component can be altered. It is also available for immediate download in different formats such as PNG, JPG, etc. So, without any further add, download it now. Download this presentation Try Before you Buy Download Free Sample Product Save Hours of Time 100% Editable Compatible with Google Slides Product Description Our Waste Management Powerpoint Ppt Template Bundles are typically designed to provide an attractive backdrop to any subject. Use them to look like a presentation pro. Related keywords Deliver a credible and compelling presentation by deploying this Eco Friendly Technology Powerpoint Ppt Template Bundles. Intensify your message with the right graphics, images, icons, etc. presented in this complete deck. This PPT template is a great starting point to convey your messages and build a good collaboration. The seventeen slides added to this PowerPoint slideshow helps you present a thorough explanation of the topic. You can use it to study and present various kinds of information in the form of stats, figures, data charts, and many more. This Eco Friendly Technology Powerpoint Ppt Template Bundles PPT slideshow is available for use in standard and widescreen aspects ratios. So, you can use it as per your convenience. Apart from this, it can be downloaded in PNG, JPG, and PDF formats, all completely editable and modifiable. The most profound feature of this PPT design is that it is fully compatible with Google Slides making it suitable for every industry and business domain. Download this presentation Try Before you Buy Download Free Sample Product Save Hours of Time 100% Editable Compatible with Google Slides Product Description Introducing our comprehensive PowerPoint presentation on Eco Friendly Technology, a dynamic resource that delves into the cutting edge world of eco-friendly technology and clean, energy efficient solutions. This engaging PPT showcases the latest developments in Green Energy Technology and highlights eco conscious innovations that are transforming industries worldwide. With a focus on sustainability and environmental responsibility, our presentation offers invaluable insights into the ever evolving landscape of clean technology. Explore the forefront of energy efficient solutions and gain a deeper understanding of how eco-friendly technology is shaping the future. Whether you re an industry professional, educator, or simply interested in the green tech revolution, this PPT will empower you with knowledge and ideas to champion a more sustainable and environmentally conscious world. Related keywords Presenting this set of slides with name Solid Waste Management Process Flow. The topics discussed in these slides are Central Storage Facility, Product Utilisation, Warehouse, Process Flow, Assemble Solid Waste, Solid Waste Generation. This is a completely editable PowerPoint presentation and is available for immediate download. Download now and impress your audience. Waste Management: ♦practical application of ♦the new ethical concepts of ♦Eco-Ethics International Union ♦By : SVR PrasadPGT Physics, KV IISc, BangaloreBasel Convention Definition of Wastes "substances or objects which are disposed of or are intended to be disposed of or are required to be disposed of by the provisions of the law" Disposal means "any operation which may lead to resource recovery, recycling, reclamation, direct re-use or alternative uses (Annex IVB of the Basel convention)"Solid wastes: domestic, commercial and industrial wastes especially common as co-disposal of wastes Examples: plastics, styrofoam containers, bottles, cans, papers, scrap iron, and other trashLiquid Wastes: wastes in liquid form Examples: domestic washings, chemicals, oils, waste water from ponds, manufacturing industries and other sourcesClassification of Wastes according to their Properties Bio-degradable can be degraded (paper, wood, fruits and others) Non-biodegradable cannot be degraded (plastics, bottles, old machines, cans, styrofoam containers and others)Classification of Wastes according to♦their Effects on Human Health and the EnvironmentHazardous wastesSubstances unsafe to use commercially, industrially, agriculturally, or economically that are shipped, transported to or brought from the country of origin for dumping or disposal in, or in transit through, any part of the territory of the PhilippinesNon-hazardous Substances safe to use commercially, industrially, agriculturally, or economically that are shipped, transported to or brought from the country of origin for dumping or disposal in, or in transit through, any part of the territory of the PhilippinesHouseholdsCommerce and IndustryAgricultureFisheriesWaste Generation by Country♦Global Waste Survey Final Report Published by IMO 1995)**from primary and secondary industry sectorsWaste Generation in the PhilippinesIn Metro Manila:it is estimated that 25 million m3 of acid and alkaline liquid waste is disposed of annually from the electronics industry.Almost 2,000 m3 of solvents and 22,000 tonnes of heavy metals, infectious wastes, biological sludges, lubricants and intractable wastes are disposed of on land or into water courses.4,000 tonnes of solid wastes are generated daily. Of these, only about 3,400 tonnes are collected and transported to existing sites.Waste Generation in ♦Iloilo ProvinceHundreds of tons of domestic wastes are generated daily by households contributing to the enormous environmental problems the world is facing.**♦Chua, TE (1996) Waste management in the coastal areas of the ASEAN region. ECLARM Proceedings No. 33♦♦EFFECTS OF WASTE IF NOT MANAGED WISELY♦Affects our health♦Affects our socio-economic conditions♦Affects our coastal and marine environment♦Affects our climate♦According to NAS-GHGs are accumulating in Earth's atmosphere as a result of human activities, causing global mean surface air temperature and subsurface ocean temperature to rise.Rising global temperatures are expected to raise sea levels and change precipitation and other local climate conditions.Changing regional climates could alter forests, crop yields, and water supplies.This could also affect human health, animals, and many types of ecosystems.Deserts might expand into existing rangelands, and features of some of our national parks might be permanently altered. According to NAS: - Some countries are expected to become warmer, although sulfates might limit warming in some areas. - Scientists are unable to determine which parts of those countries will become wetter or drier, but there is likely to be an overall trend toward increased precipitation and evaporation, more intense rainstorms, and drier soils. - Whether rainfall patterns could be reliably projected for specific areas.Activities that have altered the chemical composition of the atmosphere.Buildup of GHGs primarily carbon dioxide (CO2) methane (CH4), and nitrous oxide (N2O).CO2 is released to the atmosphere by the burning of fossil fuels, wood and wood products, and solid waste.CH4 is emitted from the decomposition of organic wastes in landfills, the raising of livestock, and the production and transport of coal, natural gas, and oil.NO2 is emitted during agricultural and industrial activities, as well as during combustion of solid waste and fossil fuels. In 1977, the US emitted about one-fifth of total global GHGs.Inventory of US Greenhouse Gas Emissions and Sinks: 1990-2000, US EPA, Office of Atmospheric Programs, April 2002 EPA 236-R-02-003. - Reduce office paper waste by implementing a formal policy to duplex all draft reports and by making training manuals and personnel information available electronically. - Improve product design to use less materials. - Redesign packaging to eliminate excess material while maintaining strength. - Work with customers to design and implement a packaging return program. - Switch to reusable transport containers. - Purchase products in bulk. Reuse - Reuse corrugated moving boxes internally. - Reuse office furniture and supplies, such as interoffice envelopes, file folders, and paper. - Use durable towels, tablecloths, napkins, dishes, cups, and glasses. - Use incoming packaging materials for outgoing shipments. - Encourage employees to reuse office materials rather than purchase new ones. Donate/Exchange - old books - old clothes - old computers - excess building materials - old equipment to local organizations Employee Education - Develop an "office recycling procedures" packet. - Send out recycling reminders to all employees including environmental articles. - Train employees on recycling practices prior to implementing recycling programs. - Conduct an ongoing training process as new technologies are introduced and new employees join the institution. Employee Education - education campaign on waste management that includes an extensive internal web site, quarterly newsletters, daily bulletins, promotional signs and helpful reference labels within the campus of an institution. Preventing Waste - Animal by product(ABPs) Biodegradable waste Chemical waste Commercial waste Business waste Biomedical waste Bulky waste 5. It is defined as " non liquid, non-soluble materials ranging from municipal garbage to industrial wastes that contain complex & sometimes hazardous substances" Solid waste also include Garbage Rubbish Demolition products Sewage treatment residue Dead animals Manure and other discarded material. - Per capita solid waste out put 0.25-2.5 Kg/day 6. Agriculture Fisheries Household Commerce and industry 7. Broadly there are 3 types of waste which as follows 1. Household waste as municipal waste 2. Industrial waste as hazardous waste 3.Biomedical waste or hospital waste as infectious waste 8. Municipal solid waste consist of-- household waste construction and demolition debris sanitation residue waste from streets With rising urbanization and change in life style and food habits ,the amount of municipal solid waste has been increasing rapidly and its composition changing. 10. Industrial and hospital waste is considered hazardous as they may contain toxic substances Hazardous waste could be highly toxic to humans, animals and plants. They are - corrosive - highly inflammable or explosive In the industrial sector the major generators of hazardous waste are the metal' chemical' paper, pesticide, dye and rubber goods industries. Direct exposure to chemicals in hazardous waste such as mercury and cyanide can be fatal 11. Bio-medical waste means "Any waste which is generated during the diagnosis, treatment or immunization of human beings or animals or in research activities pertaining thereto or in the production or testing of biological" -Bio-medical waste rules ,1998 It may includes wastes like sharp waste, pathological waste, pharmaceutical waste, genotoxic waste, chemical waste, and radioactive waste etc. 12. A♦Health hazard If solid waste are not collected and allowed to accumulate , they may create unsanitary conditions. This may lead to epidemic outbreaks . Many diseases like cholera, Diarrhea, dysentery, plague, jaundice, or gastro-intestinal diseases may spread and cause loss of human lives. 13. In addition improper handling of the solid wastes , a health hazard for the workers who come in direct contact with the waste. B.Environmental impact If the solid wastes are not treated properly decomposition and putrefaction(decay) may take place. The organic solid waste during decomposition may generate obnoxious (intolerable odour) 14. The 3Rs (Reduce, Reuse, Recycle) to be followed for waste management. 15. Disposable goods: paper plate, paper bowl, Styrofoam cup, plastic spoon, roll of paper towels, paper napkin♦Durable goods: ceramic♦plastic plate, metal spoon, glass♦plastic drinking cup, dish towel, cloth napkin) Recovery of one tonne paper can save 17 trees. 16. Instead of buying new containers from the market, use the ones that are in the house. Don't throw away the soft drink can or bottle cover them with home made paper or paint on them and use them as pencil stands or small vases. 17. Use shopping bags made of cloth or jute which can be used over and over 19. There are a number of concepts about waste management which vary in their usage between countries or regions. Some of the most general, widely used concepts include: 1. Waste hierarchy - The waste hierarchy refers to the "3 Rs" reduce, reuse and recycle, which classify waste management strategies according to their desirability in terms of waste minimization. The waste hierarchy remains the cornerstone of most waste minimization strategies. ♦The aim of the waste hierarchy is to extract the maximum practical benefits from products and to generate the minimum amount of waste. ♦21. Polluter pays principle - the Polluter Pays Principle is a principle where the polluting party pays for the impact caused to the environment. With respect to waste management, this generally refers to the requirement for a waste generator to pay for appropriate disposal of the unrecoverable material. 22. Waste management is the storage collection transport and handling recycling disposal and monitoring of waste materials. 23. Storage- ♦Galvanized steel dust bin ♦Paper sack ♦Public bins 24. Collection - ♦House-to-house collection ♦Collection from the public bins 25. Waste handling and separation involves activities associated with waste management until the waste is placed in storage containers for collection. Handling also encompasses the movement of loaded containers to the point of collection, waste is transferred from a smaller collection vehicle to larger transport equipment 26. Recycling refers to the collection and refuse of waste materials such as empty beverage container. The materials from which the items are made can be processed into new products. Materials for recycling may be collected separately from general waste using dedicated bins. 27. 1. Dumping 2. Controlled Tipping or Sanitary Landfill 3. Incineration 4. Composting 5. Manure pits 6. Burial 28. Public hygiene and health. Reuse, recovery and recycle Energy generation Sustainable development Aesthetics 29. Low lying areas. Mainly for dry refuses Kolkata disposes by this method and reclaimed land given for cultivation. ♦Unsanitary method ♦Exposed to flies and rodents ♦Nuisance ♦Dispersed by wind ♦pollution of surface water 30. Satisfactory method ♦Material placed in a trench ♦compacted with earth at the end of the working day. ♦Modified sanitary land fill where compaction and covering are accomplished once or twice a week. 31. 3 Methods 1. Trench method 2. Ramp method 3. Area method ♦Refuse is compacted on its exposed surface with excavated earth (30 cm). 32. Long trench of 6-10 feet deep and 12-36 feet wide. ♦Refuse is compacted and covered with excavated earth. ♦Refuse is filled up to 6 feet. It is estimated one acre of land per year for 10,000 population. ♦RAMP METHOD: suited where the terrain is moderately sloping. 33. Used for filling land depressions, disused quarries and clay pits. ♦Refuse is deposited, packed and consolidated in uniform layers for 6-8 feet. Each layer is sealed with a mud cover at least 12 inches. ♦Sealing prevents infestation by flies and rodents. ♦Prevents nuisance of smell and dust. 34. Changes - ♦Chemical ♦Bacteriological ♦Physical The temperature rises to over 60 deg. C within 7 days and kills all pathogens and hastens the decomposition process. It takes 4 to 6 months for complete decomposition. 38. it is a disposal method in which solid organic wastes are subjected to combustion so as to convert them into residue and gaseous products. This process reduces the volumes of solid waste to 20-30% of the original volume. Also described as thermal treatment Where land is not available ♦Hospital waste 39. Method of combined disposal of refuse and night soil/ sludge ♦Principal by products are: CO2, Water and heat ♦End product- ♦compost ♦Methods a. Bangalore method b. Mechanical composting c. Vermicomposting 41. IISc- Indian Council of Agricultural Research. Trenches are dug 3ft deep, 5-8ft broad, 15-30ft long. ♦Composting procedure ♦1. Layer of Refuse- 15 cm ♦2. Layer of Night soil - 5 cm ♦Physical, chemical and biological changes takes place 42. ♦Compost manufactured by processing raw materials. 1. ♦Screening 2. ♦Pulverization (
