Dorcy flashlights are known for their durability, affordability, and high performance, but incorrect battery placement can lead to malfunctions or even damage the flashlight. Many users struggle with issues like reversed polarity, battery corrosion, or improper batteries for your Dorcy flashlight ensures longer runtime, better brightness, and overall reliability. Below are three top battery options that work best with Dorcy flashlights: These batteries provide long-lasting power and are leak-resistant, making them ideal for flashlights used occasionally or for emergency preparedness. With higher energy output and superior longevity, these batteries offer maximum brightness and extended runtime for heavy-duty flashlight use. A cost-effective and eco-friendly option, these rechargeable batteries provide consistent power and can be recharged up to 2,100 times, reducing waste and long-term costs. Properly inserting batteries into your Dorcy flashlights come in different models, each requiring specific battery types such as AA, AAA, C, D, or rechargeable battery packs. Always refer to the flashlight's user manual or the battery compartment label for the correct battery type. Most Dorcy flashlights have a twist-off or slide-open battery compartment located at the tail cap or near the head. For twist-off compartments, firmly grip the flashlight's base and turn it counterclockwise to unscrew the cap. For slide-open models, press the release latch and slide the cover off. Look for polarity markings (+ and -) inside the batteries accordingly: For series configuration: All batteries face the same direction. After inserting the batteries, reattach the battery cap or cover: Twist-on caps: Rotate clockwise until snug. Slide-on covers: Push firmly until it clicks into place. Turn on your Dorcy flashlight to check if it functions properly. If it does not light up, remove and reinsert the batteries, ensuring proper polarity and secure connections. Even though inserting batteries seems straightforward, several common mistakes can cause your Dorcy flashlight to malfunction. Here are some pitfalls to avoid: One of the most frequent errors is placing the battery compartment. Incorrect placement can prevent the flashlight from turning on or, in rare cases, damage internal circuits. Using a mix of old and new batteries can lead to uneven power distribution, reducing efficiency and type. Dorcy flashlights are designed for specific battery sizes (AA, AAA, C, D, or rechargeable packs). Using the wrong type may cause improper fit, weak performance, or even damage to the flashlight's contacts. Check the user manual for the recommended battery type. If the battery cover is not tightened or closed securely, it may cause intermittent power issues or allow dust and moisture to enter, affecting performance. Ensure the compartment is fully closed before use. Over time, old batteries can leak and cause corrosion inside the compartment. If you notice a white or greenish residue, clean the contacts with a cotton swab and vinegar or baking soda solution before inserting new batteries. Proper maintenance ensures your Dorcy flashlight remains reliable and functional for years. Follow these essential tips to keep it in top condition. If you don't plan to use your flashlight for an extended period, remove the batteries to prevent leakage. Store batteries in a cool, dry place away from direct sunlight or extreme temperatures. Over time, battery terminals may accumulate dirt or corrosion, affecting conductivity Clean the contacts with a dry cloth or use a cotton swab dipped in rubbing alcohol to remove residue. Using batteries before they are fully depleted to maintain consistent performance. Although some Dorcy flashlights are water-resistant, prolonged exposure to moisture can cause internal damage. Store your flashlight in a dry environment and wipe it down if it gets wet. If your flashlight is waterproof or water-resistant, inspect the rubber O-rings and seals regularly. Apply a thin layer of silicone grease to keep them flexible and maintain a tight seal. For emergency preparedness, test your flashlight every few weeks to ensure it's in working condition. This is especially important for flashlights stored in emergency kits, vehicles, or camping gear. If your Dorcy flashlight isn't working, don't panic. Follow these troubleshooting steps to diagnose and fix common issues. Ensure the batteries are inserted correctly, following the + (positive) and - (negative) polarity markings. Try replacing old or weak batteries with new, high-quality batteries with new, high-quality batteries may not make proper contact. Tighten the cap or battery cover firmly to ensure a secure connection. Press the power button multiple times to check if it's stuck or unresponsive. If the button is jammed, clean around it using compressed air or a soft brush. If the flashlight flickers, it may have a loose internal connection. Gently shake the flashlight to detect any rattling parts inside. Remove the batteries and let the flashlight sit for 5-10 minutes. Reinsert fresh batteries and test again. If none of these steps work, your Dorcy flashlight may have a damaged circuit or LED. In this case, contact Dorcy customer support for further assistance or consider replacing the unit. Properly inserting batteries in a Dorcy flashlight is essential for ensuring reliable performance. By following the correct steps—checking the battery type, inserting them with the right polarity, and securely closing the battery damage. To keep your flashlight working optimally, choose high-quality batteries like Energizer MAX, Duracell Optimum, or Panasonic eneloop rechargeables, and maintain it by regularly checking for corrosion, cleaning the battery contacts, and storing it in a dry place. If your flashlight fails to turn on, simple troubleshooting steps like inspecting the power button, checking for loose connections, or replacing old batteries can help restore functionality. Whether you use your Dorcy flashlight for camping, emergencies, or everyday tasks, proper battery installation and maintenance for Dorcy flashlights. The type of batteries required depends on the specific model of the Dorcy flashlight. Most standard models use AA, AAA, C, or D batteries, while high-performance models may use 18650 rechargeable lithium-ion battery type. Each flashlight has polarity markings (+ and -) inside the battery compartment. Insert the positive end (+) facing the designated positive terminal and the negative terminal. In series configurations, whereas in parallel configurations, all batteries face the same way. If the flashlight doesn't turn on, double-check the battery orientation. If your Dorcy flashlight isn't working after inserting fresh batteries, try the following troubleshooting steps: Check the polarity - Make sure the batteries are inserted correctly. Inspect the batteries are inserted correctly. Inspect the battery compartment is fully closed - A loose cap or cover can prevent battery contact. Test with another set of batteries - Even new batteries can be defective. Try a different set to confirm if the issue is battery-related. Press the power button multiple times - Sometimes, dust or debris may interfere with the switch. Yes, many Dorcy flashlights support rechargeable batteries, such as NiMH (Nickel-Metal Hydride) AA/AAA or lithium-ion 18650 batteries are cost-effective and eco-friendly, but ensure they have the correct voltage for your flashlight model. Some Dorcy flashlight flickers or appears dim despite using fresh batteries, potential causes include: Loose battery connections - Ensure batteries are securely in place. Corroded batteries were stored for long periods, they may have lost their charge. Defective LED or internal wiring - If flickering persists, the flashlight may need repair or replacement. Battery leakage occurs when alkaline batteries if the flashlight won't be used for months. Store the flashlight in a cool, dry place away from direct sunlight. Use highquality batteries from reliable brands like Duracell, Energizer, or Panasonic. Check batteries and the flashlight's brightness from reliable brands like Duracell, Energizer, or Panasonic. Check batteries and the flashlight's brightness settings. Rechargeable batteries last 500-2,100 charge cycles, depending on the brand and capacity. If you use your flashlight frequently, check and replace the batteries every few months to ensure optimal brightness and performance. Do you have a DORCY flashlight you never use because you can't figure out how to put batteries in it? Do you dread the hassle of finding new batteries every time your flashlight runs out of juice? Don't worry, and we've got the answer for you! Batteries are essential for any flashlight, and the DORCY flashlight. We'll also discuss the different types of batteries, their uses, and how to select the right one for your needs. Finally, we'll provide you with a guide on changing the battery in your DORCY flashlight, it's essential to have a few tools on hand for a smooth process. The primary tools you'll need include a small screwdriver (if applicable), a clean cloth for wiping surfaces, and a reliable light source to ensure proper visibility during the installation. B. Types of Batteries RecommendedDORCY flashlights are designed to work with various battery types, providing flexibility for users. Commonly recommended battery types include alkaline batteries for standard use, lithium batteries for enhanced performance and longer life, and rechargeable batteries for an eco-friendly and cost-effective option. Refer to your DORCY flashlight is directly influenced by the quality of the batteries you choose. Opting for high-quality batteries ensures consistent power output and longer runtime and reduces the risk of leakage or damage to your flashlight. Investing in reputable battery brands enhances your flashlight's overall reliability and lifespan. Battery installation is a crucial aspect of maintaining your DORCY flashlight's optimal performance. Follow these step-by-step instructions to ensure a seamless installation process. A. Preparing the Flashlight Turning Off the Flashlight T during the installation. Checking for Existing Batteries Examine the flashlight's battery compartment to see if any batteries are already installed. Remove any existing batteries Examine the Right Batteries Examine the flashlight's manual for signs of corrosion or debris. B. Choosing the Right Batteries Examine the flashlight's manual for signs of corrosion or debris. B. Choosing the Right Batteries Examine the flashlight's manual for signs of corrosion or debris. B. Choosing the Right Batteries Examine the flashlight's manual for signs of corrosion or debris. B. Choosing the Right Batteries Examine the flashlight's manual for signs of corrosion or debris. B. Choosing the Right Batteries Examine the flashlight's manual for signs of corrosion or debris. B. Choosing the Right Batteries Examine the flashlight's manual for signs of corrosion or debris. B. Choosing the Right Batteries Examine the flashlight's manual for signs of corrosion or debris. B. Choosing the Right Batteries Examine the flashlight's manual for signs of corrosion or debris. B. Choosing the Right Batteries Examine the flashlight's manual for signs of corrosion or debris. B. Choosing the Right Batteries Examine the flashlight's manual for signs of corrosion or debris. B. Choosing the Right Batteries Examine the flashlight's manual for signs of corrosion or debris and the flashlight's manual for signs of corrosion or debris and the flashlight's manual for signs of corrosion or debris and the flashlight's manual for signs of corrosion or debris and the flashlight's manual for signs of corrosion or debris and the flashlight's manual for signs of corrosion or debris and the flashlight's manual for signs of corrosion or debris and the flashlight's manual for signs of corrosion or debris and the flashlight's manual for signs of corrosion or debris and the flashlight's manual for signs of corrosion or debris and the flashlight's manual for signs of corrosion or debris and the flashlight's manual for signs of corrosion or debris and the flashlight's manu the recommended battery types. Match the specified battery types with the ones you have on hand to ensure compatibility. Using the correct batteries is crucial for the flashlight's optimal performance and longevity. Flashlight ModelRecommended Battery Types Model XYZAA Alkaline or AAA LithiumModel ABCCR123A LithiumModel DEFAAA Rechargeable Checking Battery Expiry Dates Inspect the expiry dates on your batteries to ensure they are within their usable period. Using expired batteries with fresh ones. C. Opening the Battery Compartment Locating the Battery Compartment Familiarize yourself with the flashlight's design and locate the battery compartment. In most DORCY flashlights, the battery compartment is situated near the tailcap or within the body of the flashlight models may have battery compartments secured with screws. Use a small screwdriver to carefully remove the screws without damaging the flashlight's casing. Exercise caution to avoid stripping the screw heads. D. Inserting Batteries Correct polarity (positive and negative). Align the batteries according to these markings to ensure proper electrical contact. Incorrect alignment may lead to malfunction or damage. Battery TypePositive (+)Negative (-)Alkaline AAARaisedFlatLithium AALongerShorterRechargeableMarkedUnmarked Ensuring a Secure Fit Insert the batteries into the compartment, ensuring a snug fit. Gently press them down to guarantee proper contact with the terminals. A secure fit prevents any interruptions in power flow and maintains a stable connection. E. Closing the Battery Compartment lid or cover securely. Ensure that it is tightly sealed to prevent moisture or debris from entering the compartment. Tighten any screws with the appropriate tool. Checking for Any Loose Connections. Loose batteries or poorly secured compartments can cause intermittent functionality. Address any issues immediately to guarantee reliable performance. Proper care and maintenance of your DORCY flashlight batteries contribute significantly to the device's performance and longevity. Here are essential tips and best practices to follow: A. Storing Batteries contribute significantly to the device's performance and longevity. Here are essential tips and best practices to follow: A. Storing Batteries contribute significantly to the device's performance and longevity. battery storage case to prevent contact between batteries, reducing the risk of short circuits. Avoid storing batteries in the flashlight for extended periods, especially if it won't be in use, to prevent corrosion or leakage. Battery TypeStorage TemperatureAlkaline AAA0°C to 30°CLithium AA-20°C to 60°CRechargeable10°C to 25°C B. Replacing Batteries Promptly Replace batteries as soon as you notice diminished performance or reduced brightness. Continuing to use weak batteries may lead to issues like flickering or complete failure. Keep track of the flashlight's usage and have spare batteries readily available for quick replacements. C. Cleaning Battery Contacts Regularly inspect and clean the battery contacts within the flashlight using a dry, lint-free cloth. Any accumulated dirt, debris, or corrosion on the contacts can hinder the electrical connection and reduce performance. For stubborn corrosion, use a small brush or cotton swab dipped in vinegar to clean the contacts gently. Cleaning FrequencyRecommended Cleaning SolutionMonthlyIsopropyl AlcoholAs NeededVinegar (for corrosion) D. Maximizing Battery Life Extend the life of your batteries and enhance overall efficiency with these practices: Store rechargeable batteries before they are completely depleted. Remove batteries during long periods of flashlight inactivity. Battery TypeCharging FrequencyMaximum Charge CyclesRechargeableBefore Depletion500-1000 cycles Encountering issues with your DORCY flashlight can be frustrating, but understanding common problems and their solutions can help ensure optimal performance Here's a guide to troubleshooting some of the most frequent issues: A. Flashlight Not Turning On Checking Battery Orientation Ensure that the batteries are inserted correctly, following the indicated polarity. Incorrect orientation Ensure that the batteries are inserted correctly, following the indicated polarity. guidance on proper battery installation. Verifying Battery Condition Test the batteries with a battery tester or replace them with fresh ones to confirm their condition. Over time, batteries within their recommended lifespan. B. Diminished Light Output Examining Battery Contacts Inspect the battery contacts within the flashlight for dirt, corrosion, or debris. Poor contact between the batteries and the flashlight's contacts within the flashlight for dirt, corrosion, or debris. Poor contact between the batteries and the flashlight's contacts within the flashlight's contacts within the flashlight for dirt, corrosion, or debris. Poor contact between the batteries and the flashlight's contacts within the flashlight's contacts within the flashlight's contacts within the flashlight for dirt, corrosion, or debris. Poor contact between the batteries and the flashlight's contacts within the flashlight's contacts within the flashlight for dirt, corrosion, or debris. Poor contact between the batteries and the flashlight's contacts within the flashlight's contacts within the flashlight for dirt, corrosion, or debris. Poor contact between the batteries and the flashlight's contact between the batteries and the flas contacts doesn't resolve the issue, replace the batteries with fresh ones. Diminished light output may occur when the batteries are weak or nearing the end of their lifespan. Using high-quality batteries are weak or nearing the end of their lifespan. Using high-quality batteries are weak or nearing the end of their lifespan. Using high-quality batteries are weak or nearing the end of their lifespan. Using high-quality batteries are weak or nearing the end of their lifespan. Using high-quality batteries are weak or nearing the end of their lifespan. Using high-quality batteries are weak or nearing the end of their lifespan. Using high-quality batteries are weak or nearing the end of their lifespan. Using high-quality batteries are weak or nearing the end of their lifespan. Using high-quality batteries are weak or nearing the end of their lifespan. Using high-quality batteries are weak or nearing the end of their lifespan. Using high-quality batteries are weak or nearing the end of their lifespan. Using high-quality batteries are weak or nearing the end of their lifespan. Using high-quality batteries are weak or nearing the end of their lifespan. Using high-quality batteries are weak or nearing the end of their lifespan. Using high-quality batteries are weak or nearing the end of substance around the batteries or inside the battery compartment, it indicates battery leakage. Remove the batteries immediately, being cautious not to touch the substance, as it may be corrosion. Clean the affected area using a mixture of water and baking soda or a mild acid like vinegar. Wipe away the corrosion clean the substance, as it may be corrosion. carefully, and ensure the compartment is thoroughly dry before inserting new batteries. To prevent future leakage, avoid mixing battery types and promptly replace expired batteries. A. Regular Inspections of your DORCY flashlight. Check for any signs of wear and tear, including scratches, loose components, or damaged switches. Promptly address any issues to prevent further damage and ensure optimal performance. B. Cleaning the Flashlight Clean the exterior of the flashlight regularly using a soft, damp cloth. For stubborn dirt, use a mild soap solution. Avoid harsh chemicals that may damage the casing or compromise the seals. Clean the lens with a microfiber cloth to maintain clarity and brightness. C. Checking for Firmware Updates (if applicable) Stay informed about any available firmware that can be updated to enhance performance, introduce new features, or address any software-related issues. Refer to the manufacturer's website or support resources for instructions on updating firmware. IX. Safety Precautions A. Following Manufacturer Guidelines Adhere strictly to the manufacturer's guidelines and recommendations provided in the user manual. This includes information on battery types, maintenance procedures, and safety precautions. Deviating from these guidelines may compromise the flashlight's performance and safety. B. Handling Batteries with Care Exercise caution when handling batteries gloves if needed. Mishandling batteries can lead to electrical malfunctions leakage, or injury. C. Keeping Flashlights Away from Water Prevent water damage by keeping your DORCY flashlight away from moisture-prone environments. While some flashlights are designed to be water-resistant, it's essential to check the manufacturer's specifications and avoid exposing the flashlight to heavy rain or submersion in water to maintain its integrity. The best way to put batteries in a DORCY flashlight is to slightly press down on both ends of the battery until air can escape from inside. To access its interior parts, you should unscrew the light's head (either by hand or with a tool). From there, you can remove any old batteries and replace them with new ones before screwing everything back together. First, remove the back battery cap to change the batteries in your Dorcy-brand LED flashlight. Next, if there remains any rubber gasket on the end of the flashlight. Separate it. Please check its user manual to find out what kind and quantity of batteries are suitable for your flashlight. The battery contacts beneath the battery section as demonstrated once you have collected the necessary batteries. If the flashlight, To turn the reflector clockwise on the LED beam. With most flashlights, click a button on the rear end or side Whatever you need to light up, shine a light beam onto it. In contrast to a traditional flashlight with an overhead bulb, observe how the beam is brightest in the center. Twist the control clockwise or press the button to turn off the LED. The batteries go in the same place as they do in most other types of flashlights. To find out which way to put the battery in your DORCY flashlight, look for a diagram on the packaging or online. Once you have located it, follow these simple steps: Remove the cap by gently pressing down on one end and then pulling it off. Insert one end of the battery into that air can escape from inside. The battery is now firmly seated. Replace the cap and turn the flashlight on by pressing both switches simultaneously (the red switch should be on top, while the white switch should be on top. battery, check to see if the battery is correctly seated in the light bulb. Next, test the switches by pressing both at once. If neither of these solutions works, it may be necessary to take your flashlight apart and replace the internal components. No, Dorcy batteries are not rechargeable. No, putting the battery in your DORCY flashlight is not difficult. If you have trouble finding or inserting the battery, something may block its airflow or make it difficult for you to insert and remove it properly. In such cases, you can try using a circuit tester or disassembling your flashlight until you find out what is wrong and fix it accordingly. You should replace your DORCY flashlight battery whenever the yellow light indicator turns red or doesn't work. Please Note: For optimal performance, always charge your DORCY flashlight more than once a month, and you may experience problems with the light's beam. The high levels of electricity used to power this flashlight can cause wear on its internal components, leading to decreased brightness or even damage. In worst-case scenarios, this could result in injury due to an electric shock. When it comes to changing batteries, there are always some tips and tricks that can make the process easier and safer. We hope that by sharing our 10 tips above, you can put in an effort to change your battery safely next time. Did you know that using too much force while unscrewing could end up damaging the head of the screwdriver? Did something else work better for you? Share your experience by leaving a comment below! I am an enthusiastic student of optics, so I may be biased when I say that optics is one of the most critical fields. It doesn't matter what type of optics you are talking about - optics for astronomy, medicine, engineering, or pleasure - all types are essential. Here are the step by step instructions about how to put in the batteries of a Dorcy flashlight by rotating it counterclockwise until it comes off in your hand. 2. Insert alkaline (AA) Batteries with the (+) positive end toward head. Be sure to note the proper insertion of batteries as shown within battery chamber. Replace end-cap by rotating clockwise until tight to ensure weather/water seal of the light. 3. \*\*Twist flashlight head clockwise to the "ON" position until a "click" is heard to turn power on and focus the beam, or turn counterclockwise from the "ON" position to access "Variable Focus / Zoom Setting".\*\* (Certain Dorcy model flashlights feature this capability). 1. Why do you need my address for support inquiries? If you provide your address it will allow us to ship your replacement parts quickly if your product is covered under warranty. 2. Can I purchase replacement parts for my flashlight? Yes, in most cases replacement parts are available are on our retail site www.dorcy.com. To become a distributor email Sales Inquiries. 4. I think my Dorcy product may be defective. What should I do? For fastest response to your issue, please email our customer service department at support@dorcy.com. We will return your email within 1 to 2 business days. 5. My spotlight will not charge or does not work. What should I do? Replacement batteries and bulbs are available online at www.dorcy.com Most spotlights contain lead acid batteries and must be cared for properly and charged frequently. Dorcy will replace a defective lead acid battery within one year of purchase in the form of a retail/online receipt is required, or you may return the actual battery. 6. Does Dorcy International offer a Lifetime Warranty? No. Dorcy offers a limited One Year Warranty on most of our products. 7. The battery holder is broken in my LED flashlight. What do I do? Please email support@dorcy.com and ask for a RMA number. 8. My lens is broken on my spotlight or LED flashlight. What can I do? Unfortunately, we do not offer replacement lenses for our products. 9. I need a holster for my Dorcy Flashlight. Where can I get one? Holsters are available on our retail website www.dorcy.com 10. Where can I properly dispose of my battery? Please call your local waste management company for vendors in your immediate area or visit www.rbrc.org to find the nearest location to you. 11. My Patio Lamp does not work what do I do? Please make sure the pole is inserted all of the way and the tabs line up. There is a negative and positive in the poll that must match. Please insert firmly and once it is inserted all of the way you will hear a click. 12. I have a Dorcy light but do not know what light I have. When using the contact us area there is a area where you can upload a picture of the product which will help us in determining the product you have. 13. Maintenance for your rechargeable lights. All batteries in rechargeable lights need to be maintained and charged for 6 months it will not have a charge in it when you need it most. You should charge your lights even if you are not using them every 3 months. RMA - Return Merchandise Authorization Dorcy product return process. If you need further assistance, please feel free to contact us at support@dorcy.com. Step 1 Verify that the product is a Dorcy lighting product and has been purchased within the 1 year warranty period. Bulbs and batteries are excluded in the warranty. Step 2 Contact support@dorcy.com to have a RMA number issued. We cannot accept returns without a valid RMA. Generally, the following information is needed for a RMA request to be approved: Item number, date of purchase, receipt, description of the problem or issue. Step 3 You will receive a valid RMA number via email. Your RMA request should be processed within 3 business days. If you do not receive a response, please contact us at support@dorcy.com. Step 4Clearly mark the RMA number on the outside of the shipping packaging. Please be advised that Dorcy will not accept any packages without a valid, clearly marked RMA number is only valid for one return. All unauthorized returns will be discarded. Any information entered incorrectly may result in delays or voiding of the RMA request. RMA number, name, address, item number, purchased date, and problem description are required. If required, include printouts of any correspondence related to the return as well. Dorcy's repair/replacement service is based on volume and product availability. Products that are out of stock may require longer turnaround time. We do not carry replacement parts for all flashlights and lanterns. Please check out our website for available parts. www.dorcy.com You will receive email notification of your product shipping. Ordering online What is a Coupon Code and where do I enter it? Dorcy provides coupon codes. Coupon codes can be entered on the cart page to apply discounts. Enter the code on cart page and select update cart. Coupon code on the cart page only. I placed an order and received the wrong item. What can I do? Please email customer support at support@dorcy.com for the quickest resolution to your issue. Please include the order number, and any other important information. We will return your email within 1 to 2 business days. Where is my order and when will it ship? Once you place an order you will receive an order acknowledgement. Most orders are shipped same day via Fedex and USPS carriers. Once your order has shipped you will receive tracking information by 6pm EST. You can always log into the site www.dorcy.com and check your orders. Tracking information will be displayed. Free Shipping When free shipping is selected Dorcy will select the carrier for the parcel with the most economical and fastest delivery method possible. USPS or Fedex. Jul 04, 2024 - 12:28 AM To replace the batteries in the Dorcy 41-4254 LED Flashlight, please follow these step-by-step instructions: 1. Unscrew the tail cap of the flashlight by turning it counterclockwise. This will expose the battery compartment. 2. Remove the old batteries from the battery compartment by gently pushing them out or tapping the flashlight against your hand to dislodge them. 3. Take three new AAA batteries and ensure they are inserted correctly according to the batteries should be facing the head of the flashlight. 4. Once the batteries are properly inserted, xxxx the tail cap back onto the flashlight by turning it clockwise until it is securely tightened. 5. Test the flashlight by turning it on to ensure the new batteries are working properly. It is important to note that when replacing the batteries with care and dispose of them properly according to local regulations. For more detailed instructions, please refer to the user manual provided with the Dorcy 41-4254 LED Flashlight. Source: ... Answer this question We look to ensure that every question is answered by the best people with relevant experience, the best answers include multiple perspectives. Do you have relevant expertise or experience to contribute your answer to any of these commonly asked questions? IMPORTANT SAFETY INSTRUCTIONS • Never touch the lens while in use. Danger of high heat at the lens surface. • Never touch the halogen lamp with bare hands (natural oil from hand could damage the bulb). • Never use the spotlight in water or close to fire. • NEVER leave the spotlight unattended during use, and always KEEP AWAY FROM CHILDREN. USE: Charge the battery fully before use. Please read the following instructions carefully in order to avoid any functional disorders or damages. The spotlight by releasing the push-button switch. For constant light, keep the push-button switch down, and then push the fastener lock switch to the right. To switch off the constant light, move fastener lock switch back to the left. The Spotlight contains a 6V6Ah lead acid battery, which has to be charged before its first use (Please read the section on recharging). Page 2 www.dorcy.com Dorcy International Columbus, Ohio 43217 INSTRUCCIONES IMPORTANTES DE SEGURIDAD Nunca toque la lente mientras el reflector está en uso. Hay peligro de alta temperatura en la superficie de la lente. La luz del reflector halógeno es muy brillante, por lo tanto NUNCA se debe mirar directamente a la luz ni deslumbrar a alguien con el reflector. Nunca toque la bombilla halógena con las manos descubiertas (los aceites naturales de las manos podrían dañar la bombilla). Nunca use el reflector en el agua o cerca del fuego. NUNCA deje el reflector sin atender mientras lo está usando y MANTÉNGALO SIEMPRE FUERA DEL ALCANCE DE LOS NIÑOS. Para recargar el reflector, use SÓLO la fuente de suministro de electricidad de CA que se incluve O el adaptador de 12V de CC de enchufe de automóvil. ANTES DEL USO: Sírvase leer cuidadosamente las siguientes instrucciones para evitar problemas de funcionamiento o daños. El reflector, suelte el botón del interruptor. Para apagar el reflector puede encenderse oprima hacia abajo el botón del interruptor y empuje el interruptor de traba hacia la derecha. Para apagar la luz constante, simplemente lleve el interruptor de traba de nuevo a la izquierda. El reflector contiene una batería de plomo y ácido 6V6Ah que debe cargarse antes del primer uso (Sírvase leer la sección referente a la recarga). Page 3 www.dorcy.com Dorcy International Columbus, Ohio 43217 IMPORTANTES MESURES DE SÉCURITÉ: NE JAMAIS toucher aux lentilles lorsqu'elles sont utilisées. Il y a des risques de chaleur intense à la surface des lentilles. La luminosité d'une ampoule halogène est très vive, par conséquent NE JAMAIS regarder directement le phare ni le diriger vers les yeux de quelqu'un. NE JAMAIS toucher une ampoule halogène les mains nues (les huiles naturelles des mains pourraient endommager l'ampoule). NE JAMAIS utiliser le phare dans l'eau ou près du feu. NE JAMAIS laisser le phare dans l'adaptateur c.a. ou l'adaptateur automobile de 12V c.c. qui vient avec le phare pour le recharger. 06/14/07 AVANT DE L'UTILISER: Veuillez lire attentivement les directivesci-après, afin d'éviter des troublesfonctionnels ou des dommages. Pour allumer le phare, appuyez sur lebouton-pressoir. Pour une luminosité constante, laissez lebouton-pressoir. pressoir enclenché et puis, poussezle bouton de retenue vers la droite. Pour éteindre la luminosité constante, déclenchez simplement le bouton-pressoir vers la gauche. Une batterie au plomb de 6V6 Ah est intégrée au phare. Elle doit être rechargée avant la première utilisation. (Veuillezlire la partie portant sur le rechargement.) POUR CHANGER LA BATTERIE: Retirez soigneusement les 4 vis qui se trouventdans le fond du compartiment de la batterie des bornes (le fil rouge dans la borne rouge, le fil noir dansla borne noire). Rechargez la batterie jusqu'au lendemain, avant de l'utiliser. POUR CHANGER L'AMPOULE : Avant de changer l'ampoule, débranchez le phare et laissez-le refroidir au moins 10 minutes. Enlevez le compartiment de labatterie dans le fond et dévissez les 6 vis sur lepanneau latéral du boîtier. Ouvrez le contenantet retirez la goupille fendue au dos du phare. Dévissez la vis et retirez le fil de la lampe de son support. Pour retirer l'ampoule, retirez ladouille plate de l'agrafe à ressort. Insérez une ampoule quartz-halogène H3-6V 100 W neuve. Pour retirer l'ampoule, retirez ladouille plate de l'agrafe à ressort. Insérez une ampoule quartz-halogène H3-6V 100 W neuve. Pour retirer l'ampoule, retirez ladouille plate de l'agrafe à ressort. Insérez une ampoule quartz-halogène H3-6V 100 W neuve. Pour retirer l'ampoule, retirez ladouille plate de l'agrafe à ressort. Insérez une ampoule quartz-halogène H3-6V 100 W neuve. Pour retirer l'ampoule, retirez ladouille plate de l'agrafe à ressort. Insérez une ampoule quartz-halogène H3-6V 100 W neuve. Pour retirer l'ampoule, retirez ladouille plate de l'agrafe à ressort. Insérez une ampoule quartz-halogène H3-6V 100 W neuve. Pour retirer l'ampoule, retirez ladouille plate de l'agrafe à ressort. Insérez une ampoule quartz-halogène H3-6V 100 W neuve. Pour retirer l'ampoule quartz-halogène H3-6V 100 W neuve. l'adaptateur c.c. de 12 V de l'automobile OU l'adaptateur c.a. dans la prise appropriée au dos du phare ; Puis, branchez l'adaptateur c.a. dans une prise c.a. murale ou l'adaptateur c.a. dans la prise de l'allume-cigare de l'automobile ; L'indicateur DEL s'éteindra lorsque le projecteur sera complètement chargé. DÉBRANCHEZ LE PROJECTEUR UNE FOIS COMPLÈTEMENT CHARGÉ. Si vous rangez le phare plus de 2 mois, rechargez périodiquement la batterie pour éviter qu'elle se décharge complètement. Le TEMPS DE CHARGEMENT est d'environ 20 heures avec un chargeur c.a. et de 12 heures avec le chargeur c.c. La durée MAXIMALE de luminosité est de 30 minutes lorsque complètement chargé. PIÈCES DE RECHANGE: 41-0776 Batterie de 6V 6Ah 41-8086 Adapteur CC 41-0081 Ampoule halogène de 6 V 100 watts PRODUIT Nº 41-1086 Phare d'intensité lumineuse de 2 millions de bougies rechargeable
