I'm not a robot

Learn groovy scripting for beginners

However, If the condition is false then executes the statements in the else statement block. With continuous instructor support, you'll gain in-depth theoretical and practical knowledge, making you confident in Groovy scripting for automation.Course rating: 3.0 out of 5.0Duration: 3 HoursCertificate: Certificate of completion10. Switch Statement The nested if-else statement could become unreadable when you have multiple conditions. Look no further as Coursesity presents to you a comprehensive collection of courses curated especially according to your needs. This book covers Groovy fundamentals, such as installing Groovy, using Groovy tools, and working with the Groovy ... Closures can take other closure as parameters. Finally, you'll learn how to automate your Jenkins work with a step-by-step playbook of Groovy scripts. Groovy is automatically a wrapping class called Script for every program In Java, you need the main method to make a class executable. Typing information is optional. In case you want to explore more, you can take the free Groovy courses.Well if you have made it to the end, then it is certain that your quest for learning is not over yet. get() This command looks up the key in this Map and returns the corresponding value. Unlike other ... Start building powerful apps that take advantage of the dynamic scripting capabilities of the Groovy language. This will help you work with groovy in development ... In this tutorial, you will embark on a journey through the essential aspects of Groovy, equipping you with the skills to write efficient, readable, and maintainable code. Meaning the type of a variable has to be declared in advance. And it's completely interoperable with Java so your existing Java projects can start using Groovy today.How to Choose the Best Groovy CourseChoosing the best groovy course involves considering several key factors:Course Content: Ensure the syllabus covers both fundamental and advanced topics. To make code more readable switch statement is used. Allows you to interacts Groovy code Helps you to load and run Groovy script files Groovy It is the processor which executes Groovy programs and scripts. Groovy has many productive features like DSL support, closures, and dynamic typing. In a Groovy programming language, the List holds a sequence of object references. It acts as a method or a function. Webservice & API testing-SoapUI Free VersionDetailed Groovy scripting | Code Management | Rest API Testing | Coding CoverageIn this course, you will :Become ready to automate Soap and Rest real-time services.Become ready to face web service automation interviews.Coverage in this course:All basic to advanced features of SoapUI(Free Version), service mocking, Groovy details, Soap and Rest services, report generation, and code management.You can take the Webservice / API testing-SoapUI Free Version Certificate Course on Udemy.Course rating: 3.7 out of 5.0Duration: 9 HoursCertificate: Certificate of completion6. Bitwise 4. Java does not support variable substitution. Groovy Scripting for Developers/TestersGroovy is a popular scripting language among developers and testers, used in tools like SOAPUI, JMeter, and Geb. Our Apache Groovy tutorial is designed for beginners and working professionals. Automating Jenkins with GroovyThis course will teach you how to automate tasks and other useful applications using Jenkins' premier automation language, Groovy.The course includes:Groovy Fundamentals, BrieflyWorking with Jenkins and Groovy TogetherCreating Builds with GroovyWorking with Shared Libraries and Plug-insManaging Users and CredentialsIn this course, Automating Jenkins with Groovy, you'll learn to make Groovy do the grunt work. Paid Groovy CoursesFree courses offer a basic understanding and are often community-supported, while paid courses provide in-depth knowledge, structured learning paths, and additional resources like mentorship and certification.Top Apache Groovy Courses, Tutorials, Certifications list Disclosure: We're supported by the learners and may earn from course purchases.1. The Complete Apache Groovy Developer CourseLearn how to program using Apache Groovy with one of the Best Groovy classes online on Udemy.In this Groovy certification, you will learn the following: Create Groovy applications from scratch.Use the Groovy console.Write Groovy applications in IntelliJ.Understand the different features of the Groovy language.Retain Information through quizzes and exercises.This course is designed for:Beginner Programmers: With experience in other languages like Python or Ruby, you'll find Groovy's flexibility and fun dynamics make it easy to learn.Java Developers: Whether beginner or experienced, you'll see how Groovy complements Java, simplifying complex tasks and enhancing your productivity.You will learn Groovy compliments the Java language and makes some of the complex tasks from Java concise and easy. Then the old value will be replaced by the specified value. 2. Groovy is all about closures. Groovy scripting conceptsHow to automate the web services test cases in Soap UI with GroovyTesting Rest APISecurity testing with Soap UI & database testing with Soap UIBy the end of this course, you will be able to understand the web services specifications and write all kinds of effective manual and automation test cases (functional/security/database test cases) to test them in SoapUI by using Groovy. 4.2 out of 5.0 (1,589 Rating total)Duration: 31 HoursCertificate: Certificate of completion4. def myClosure = { a,b,c-> return (a+b+c) } println(myClosure(1,2,3)) Output: 6 There are many built-in closures like "It", "identity", etc. Consider the following code 2.upto(4) {println "$it"} It gives an output 2 3 4 You can also use the "times" keyword to get the same output 5.times{println "$it"} Consider, you want to print 0,2,4 with for loop in Java public class Demo { public static void main(String[] args) { for (int x = 0; x y = a+b+c println y } myClosure(1,2,3) Output: 6 A closure can return a value. Groovy also performs a lot of tasks behind the scene that makes it more agile and dynamic. Groovy Example: def y = [fName:'Jen', lName:'Cruise', sex:'F'] print y.get("fName") Output Jen Groovy- Closures A groovy closure is a piece of code wrapped as an object. This course not only introduces you to the Groovy language but also to the underlying Groovy platform. The compiler figures out the variable type at runtime and you can even the variable type. Start harnessing the power and learn Groovy online!Course rating: 4.8 out of 5.0 (97 Rating total)Duration: 2.5 HoursCertificate: Certificate of completionThus, we can conclude that Apache Groovy is a very dynamic and user-friendly programming language with a wide array of features that have applications over a multiple number of domains right from development to testing and system integration. keySet() Allows to find a set of the keys in this Map put() Associates the specified value with the given key in this Map. It stops before the else condition and exits out of the loop. Consider the following code: int x = 104 println x x == "Guru99" gives the following error 104 Caught: org.codehaus.groovy.runtime.typehandling.GroovyCastException: Cannot cast object 'Guru99' with class 'java.lang.String' to class 'int' org.codehaus.groovy.runtime.typehandling.GroovyCastException: Cannot cast object 'Guru99' with class 'java.lang.String' to class 'int' at jdoodle.run(jdoodle.groovy:3) at java.base/jdk.internal.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at java.base/jdk.internal.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:62) at java.base/jdk.internal.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:43) Command exited with non-zero status 1 Groovy-Operators An operator is a symbol which tells the compiler to do certain mathematical or logical manipulations. This dynamic language has many features which are similar to Python, Ruby, Smalltalk, and Pero. Good luck!Course rating: 4.4 out of 5.0 (86 Rating total)Duration: 2.5 HoursCertificate: Certificate of completion9. Assignment Groovy performed decision making using if, if/else, Nested if, Netsted switch statements List structure allows you to store a collection of Data Items A Map Groovy is a collection of Key Value Pairs In Groovy, Getters and setters are automatically generated for class members In Java, you can use provide getters and setters method for fields The biggest myth about Groovy is that it can only use for scripting which is not correct Some time Groovy can be slower which increased the development time Three Groovy Tools are: groovysh which executes code, groovy Console which is GUI for interactive code execution and groovy which executes scripts Basic step by step video tutorials to take you from scratch to a level where you will be having a good knowledge on groovy programming. While free courses can be a good starting point, paid courses often offer more comprehensive content and support.Beginner vs. The course prepares you for automation challenges, equipping you to handle various automation tools and ace automation interviews. Here, are major reasons why you should use and learn Groovy- Groovy is an agile and dynamic language Seamlessly integration with all existing Java objects and libraries Feels easy and natural to Java developers More concise and meaningful code compares to Java You can use it as much or as little as you like with Java apps Groovy History 2003: Developed by Bob McWhirter & James Strachan 2004: Commissioned into JSR 241 but it was abandoned 2005: Brought back by Jeremy Rayner & Guillaume Laforge 2007: Groovy version 1.0 2012: Groovy version 2 2014: Groovy version 2.3 (official support given for JDK 8) 2015: Groovy became a project at the Apache Software Foundation Features of Groovy List, map, range, regular expression literals Multimethod and metaprogramming Groovy classes and scripts are usually stored in .groovy files Scripts contain Groovy statements without any class declaration. You can use it like Perl, Python, etc. Penetration Testing: Advanced Web Testing - Jenkins and Groovy scriptingLearn how to identify a Jenkins website by enumeration and then use Groovy script to get command execution.In this course, you will:How to perform advanced web testing using Burp Suite, the professional pen testing framework. get() Returns the element at the definite position isEmpty() Returns true value if List contains no elements minus() This command allows you to create a new List composed of the elements of the original excluding those which are specified in the collection. Note: You can also install Groovy using the Zip file or as an Eclipse IDE. How to import existing projects from Eclipse and other IDEs, walk through the IntelliJ IDEA user interface, and demonstrate the powerful code generation and debugging tools. Myths about Groovy Myth Reality We can use Groovy just for scripting. The list of identifies is comma separated with an arrow (->) marking the end of the parameter list. Advanced Groovy CoursesBeginner courses focus on fundamental concepts like syntax, data types, and basic scripting, while advanced courses delve into complex topics such as meta-programming, domain-specific languages, and Groovy's integration with Java frameworks.Free vs. You will develop a Groovy application that parses GPS data from an XML file, inserts it into a database, and correlates this data with forecast data from a REST API.In this Groovy certification, you will learn the following:Get introduced to not only the Groovy language but also the underlying Groovy platform. Example of simple closure def myClosure = { println "My First Closure" } myClosure() Output: My First Closure A closure can accept parameters. groovyConsole: GUI for interactive code execution 3. Nested Switch Statement In Groovy is also possible to use nested switch statements. Why Groovy? This course is perfect for programmers and automation engineers working with Groovy scripts in SOAPUI.In this Groovy programming course, you will learn the following:Write groovy code with great ease.Get the source code of each tutorial.Understand the basics of unit testing of Java code with Groovy.This course offers a robust start to mastering Groovy scripting for effective SOAPUI automation, empowering you to streamline your workflows and improve your programming proficiency. plus() Allows you to create a new List composed of the elements of the original together along with mentioned in the collection. It also offers many productivity features like DSL support, closures, and dynamic typing. In Java, every statement ends with a semicolon. Groovy Tools We will discuss 3 important tools in this Groovy script tutorial 1. Variables are defined using the keyword "def", and the type of a variable does not need to be declared in advance. Develop a Groovy application that can parse GPS data from an XML file, insert it into a database, and even correlate this data retrieved from a REST API.Not only have a working knowledge of the Groovy language, but you'll also be able to use Groovy in a multitude of everyday use cases.By the end of the course, you will have a comprehensive understanding of Groovy and its practical applications, equipping you to use Groovy in various everyday scenarios, and enhancing both your productivity and programming versatility.Course rating: 4.5 out of 5.0 (341 Rating total)Duration: 3.5 HoursCertificate: Certificate of completion. Summary Groovy is an Object-oriented programming language used for Java platform Groovy scripting offers seamless integration with all existing Java objects and libraries Bob McWhirter & James Strachan developed groovy in 2003 List, map, range, regular expression literals are important features of Groovy Four type of operators support by Groovy are 1. Methods Description containsKey() Check that map contains this key or not? Groovy FundamentalsAs the Groovy programming language, designed to supercharge your productivity with its lightweight and succinct syntax. However, it is certainly not the only reason to use Groovy. By the end of this course, you'll have the skills to integrate Groovy into your daily development activities, making you a more versatile and efficient developer.Course rating: 4.5 out of 5.0 (5,124 Rating total)Duration: 13.5 HoursCertificate: Certificate of completion2. It can easily be integrated with Java programs. "It's just functional programming language." Groovy adopts from functional programming languages like Lisp or Closure. Groovy has the following five types of operators – Arithmetic operators: Add (+), Subtract (-), Multiplication (*), Division(/) Relational operators: equal to (==), Not equal to (!=), Less than (=) Logical operators: And (&&), Or(||), Not(!) Bitwise operators: And(&), Or(|), (^), Xor or Exclusive-or operator Assignment operators: Negation operator (~) Groovy-Loops In Java, you would define a loop as follows public class Demo { public static void main(String[] args) { for (int x = 0; x
