There is nothing like having the luxury of opening your garage door without having to look for the remote. Learn how to program the garage door opener in your Acura TSX.This article applies to the Acura TSX (2004-2008). The Acura TSX is equipped with three buttons, which are designed to program up to three garage door openers. Realistically, if you live in a complex like place, you program the main gate, then you program the second button as your garage, and you still have a third one to play around with. Programming the garage door opener makes it convenient to open or close the garage door by a press of a button, which is better than either hanging the ugly remote from the sun visor, or looking for it in the glove compartment. In order to successfully finish this procedure, you will need the actual garage door remote, just this one time, and you will need to follow the instructions below, it should be done in a matter of minutes. Read on to learn how to program the garage door opener in your Acura TSX. Material Needed Out of the three buttons, press and hold the left and the right buttons at the same time for twenty seconds. This allows you to erase anything that was programmed previously on this button. Keep them pressed until the red light flashes. Figure 1. Hold both the left and right button. Step 2 Program desired button Bring your actual garage door remote inside your car, then choose which button out of the three buttons you want designated to your garage. Press and hold the garage door remote's button at the same time as you press and hold the button in the car that you want to program. Keep them both pressed until you see the red light flash a few times. This means that your button is now programmed. Figure 2. Program the desired button. Step 3 Program other buttons To program another button to another remote, bring the new remote in the car, then press the other button that you want to program, and press the new remote's button at the same time. Once the red light flashes, it means the next button has been programmed. Figure 3. Repeat previous step for other desired button. Related Discussion Program Garage Door Opener - AcuraZine.com You can easily program the three HomeLink buttons installed as features on certain Acura car models to open any garage door or automated gate. Programming the buttons saves you the hassle of trying to keep track of your remote openers and allows for direct access. You can configure the HomeLink console in your Acura to work with your garage door in less than five minutes with these instructions. Complete Step 1 if you're programming the buttons for the first time; otherwise, skip to Step 2. Hold down the first and third HomeLink buttons in the overhead area for 20 seconds to delete any factory-programmed defaults. The light in the HomeLink symbol flashes upon completion. Hold your remote control garage opener within range (four to 12 inches) of the HomeLink console. The necessary programming distance between the console and the remote can vary, so keep the remote steady for 15 seconds before you decide to change the distance. Hold down both the HomeLink button you want programmed and the button of your garage door opener. Keep both buttons pressed simultaneously until the indicator light in the HomeLink symbol flashes quickly. This should take around 30 seconds. Release both buttons. The HomeLink button is now configured to work with your garage door. Repeat the procedure for any other buttons you want to program.
